

This assignment, if correctly answered, adds 2 points to the lowest of one of your ⁷~~8~~ best quiz scores. While it is not mandatory, no partial credit is given on quizzes and a potential 9/10 looks much better than 7/10.

Please return the assignment on **Tuesday, January 27th** at the very beginning of class.

NAME: _____

One afternoon, Cindy made a large number of muffins for the office party tomorrow. She left them to cool on the countertop. Her daughter Jenny came downstairs and divided the muffins into 4 equal piles with one left over, which she ate. She also ate one of the four piles (yes, the entire pile!), then went back upstairs. Later on, her husband Andy walked by the muffins, and again divided them into four equal piles with one left over, which he ate. Andy also ate one of the four piles and left.

When Cindy came home, only 60 muffins were left.

How many muffins had Cindy made? _____
